Brief Statement of Research Interest

My areas of interest include food and nutrients chemistry, toxicology, enzymology, mycotoxins and pesticides residues analysis and tracing other health risk contaminants in food/feed chain. Currently I am working on the ethanol production from waste fruits and used of coal as fertilizer. I am also working on utilization of high oil yielding algal species for biodiesel production. Parallel to this, I am also screening the potentials of local algal species for bioremediation of heavy metals in drinking water resources.
